

3 PHASE REJUVENATION

PHASE 1

Treatment

The MDerma™ needling device is applied to the skin causing micro trauma to the problem area.

NB: Combining Factor4 with a MDerma™ micro needling treatment feeds the treated area with potent growth factors activating collagen stimulation and rejuvenating epidermal growth.

PHASE 2

Healing

After treatment, the skin heals itself producing new collagen, elastin, and healthy skin cells.

PHASE 3

Post Treatment

As the skin is rejuvenated, it appears tighter, fresher, fuller, and smoother eliminating fine lines, refining wrinkles and supercharging the overall skin's texture, tone and appearance.

NB: We recommend daily use of the world leading vitamin enriched Beaute Pacifique product line.

a superior, non-invasive, regenerative micro-needling treatment for your skin

MDerma™ is the safest, most advanced, regenerative micro-needling treatment for your skin.

Why the

The MDerma™ is a superior, non-invasive, regenerative micro-needling treatment for your skin.

The MDerma™ uses sterile, sealed individual and disposable needle cartridges for optimal patient safety. Every cartridge has multiple needles, with proprietary technology, penetrating vertically generating small micro skin channels, while stimulating the natural production of collagen. These channels carry up to 80% more topical nutrients, allowing penetration deep to the skin fibroblasts, feeding the cells found in the dermis and the basal layer. This increases the absorption of active ingredients into the skin, stimulating the repair at a cellular level and accelerating the regeneration of the skin's epidermal cells.

The treatment is similar to laser treatments, but without the severe side effects or the long recovery time. There are some studies that show it is more effective than traditional microdermabrasion and chemical peels. The disposable needles minimise the risk of cross-contamination and the adjustable depth allows treatment that is adaptable to individual needs.

MDerma™ is so advanced, it is appropriate and suitable to use in sensitive and previously inaccessible areas such as the upper and lower eyes, lips and nose.

Minimal recovery time. Minimal discomfort.

The MDerma™ improves and revitalizes damaged skin, using the mechanisms associated with the natural healing processes of the body. This process is called Percutaneous Therapy Induction of Collagen.

When creating small lesions in the skin, the body responds with a physiological process that improves the thickness, color, texture and consistency of the skin. Visible results from the first application can include:

- Tightens, lifts and rejuvenates the skin
- Reduces keloids scars, surgical scars
- Reduces acne scarring
- Reduces wrinkles and fine lines
- Reduces stretch marks
- Decreases pore size
- Aids in the regeneration of skin by inducing capillary exfoliation
- Aids in hair regeneration when combined with Factor 4 and laser hair treatments

Each disposable cartridge contains 9, 31 gauge stainless steel micro needles. The MDerma™ allows the practitioner to control the depth of the treatment and the rate of penetration.

Ask your practitioner for more information on the MDerma™ skin needling treatment.

How many treatments it is recommended for rejuvenation?

Skin rejuvenation - 4 to 6 treatments.
Acne scars - minimum 6 treatments.
Stretch marks - 4 to 8 treatments.

How soon will I see results?

Visible results are obvious after just one treatment but the most significant results are after four to six treatments. Your skin will continue to improve over the next 6-12 months.

Is the treatment painful?

For minimum depths there is minimal pain. Treatments with depths greater than 0.5mm, you may choose to apply topical anesthetic between 15 and 40 minutes before the procedure.

How long is the recovery process?

Flushing of the skin usually last between 12 and 48 hours after treatment although most people are able to return to their daily activities immediately after treatment.
